23720 7590 10/29/2007 WILLIAMS, MORGAN & AMERSON 10333 RICHMOND, SUITE 1100 HOUSTON, TX 77042			EXAMINER AHN, SAM K	
			ART UNIT 2611	PAPER NUMBER
			MAIL DATE 10/29/2007	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/488,351

Applicant(s)

COLE, TERRY L.

Examiner

Sam K. Ahn

Art Unit

2611

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 August 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 2-32, 35 and 36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 2-11 and 28 is/are allowed.
- 6) ☒ Claim(s) 12-27, 29-32, 35 and 36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 20 January 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application
- ☐ Other: _____

DETAILED ACTION

Response to Arguments

1. Applicant's argument, see p.10, filed 08/14/07, with respect to claims 2-11 and 28 have been fully considered and are persuasive. The 103(a) rejection of claims 2-11 and 28 has been withdrawn.
2. Applicant's arguments filed 08/14/07 have been fully considered but they are not persuasive. Claims 12 and 21 recite an apparatus claim. However, the claims must be structurally distinguishable from the prior art, note MPEP chapter 2181 of Apparatus and Article Claims – Functional Language. Therefore, the applicants' argument of determining a training parameter... performing training.. and providing the training parameter..." do not provide structurally distinguishable apparatus from the prior art, in this case Samson in view of Wiese. Therefore, the examiner maintains the rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 29 and 30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims depend on a cancelled claim 1, thus fails to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 12-14, 16, 17, 21-25, 28, 29, 35 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Samson US 5,881,102 and Wiese et al. US 6,434,119 B1 (Wiese, cited previously).

Regarding claim 12, Samson teaches establishing a communication channel between a first transceiver and a second transceiver (see Fig.3) in low power mode (note c.4, l.29 and c.6, l.14-24); determining at the first transceiver, a training parameter (training such by flagging for software or through flip flop for hardware, low power state can be achieved wherein some of the modem's functions are shut down, note c.4, l.29-31), performing training, at the first transceiver, based at least on the training parameter (note c.6, l.33-35 wherein the modem is switched to low power mode and note c.4, l.29-31 wherein when low power mode, training is performed by shutting down some of the functions); and providing the training parameter that is used in training of the first transceiver to the second transceiver (note c.5, l.51-53 sending state signal to the second transceiver). However, Samson does not explicitly teach the training parameter is

determined in response to establishing the communication channel in the low power mode.

Wiese teaches, in the same field of endeavor, a method and apparatus comprising establishing a communication channel between a first transceiver and a second transceiver in low power mode, (note col.6, lines 16-33) wherein Wiese teaches transmission of an initialization signal at a lower power level or in a low power mode, and increasing the power level until the signal is received by the other transceiver.

Hence both Samson and Wiese teach establishing communication between two transceivers in low power mode, wherein Wiese further suggests increasing the power level of transmission until signal is received. Therefore, it would have been obvious to one skilled in the art at the time of the invention to initialize the communication channel in low power in the system of Samson for the purpose of reducing power consumption and potentially minimize interference with other modem lines that may be affected as noise when high powered signaling is performed, as taught by Wiese (note col.6, lines 16-33).

Regarding claim 13, Samson in view of Wiese teach all subject matter claimed, as applied to claim 12. Wiese further teaches transmitting and receiving data with the transceiver (VTU-R) (see Fig.5).

Regarding claim 14, Wiese further teaches wherein transmission of remote initialization signal at a relatively low power level and incrementing until the signal is detected. (note col.6, lines 16-30) Therefore, it is inherent that the increment of level of power taught by Wiese is the smallest amount of power acceptable, since the signal is acceptable only after it has been detected.

Regarding claim 16, Wiese further teaches computation of signal to noise ratio for determining the training parameter. (note claim 10) Signal to noise ratio includes determination of phase and amplitude distortion, and therefore it is inherent that the training parameters include determining phase and amplitude distortion of the communication channel.

Regarding claim 17, the claim is rejected as applied to claim 16 with similar scope.

Regarding claim 21, the claim is rejected as applied to claim 12 with similar scope.

Regarding claim 22, Wiese further teaches wherein the first and second transceiver is a DSL modem (note c.1, l.45, conforming to ADSL standard).

Regarding claim 23, the claim is rejected as applied to claim 22 with similar scope.

Art Unit: 2611

Regarding claim 24, the claim is rejected as applied to claim 14 with similar scope.

Regarding claim 25, the claim is rejected as applied to claim 16 and 17 with similar scope.

Regarding claim 29, the claim is rejected as applied to claim 14 with similar scope.

Regarding claim 35, the claim is rejected as applied to claim 12 with similar scope.

Regarding claim 36, the claim is rejected as applied to claim 12 with similar scope.

5. Claims 15 and 30-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Samson US 5,881,102 and Wiese et al. US 6,434,119 B1 (Wiese, cited previously) and Palm US 6,751,254 B1 (cited previously).

Regarding claim 15, Samson in view of Wiese teach all subject matter claimed, as applied to claims 2 or 13, however, do not explicitly disclose power cutback in the range of 0-30 dB.

Palm teaches power adjustments wherein during initialization, power levels are incremented in the increments of 2 dB, a predetermined level. (note col.6, lines 27-43) Therefore, it would have been obvious to one skilled in the art at the time of the invention to implement Wiese's teaching of initializing the communication

channel in low power mode by incrementing in 2 dB, as taught by Palm, for the purpose of appropriately incrementing, without incrementing too rapidly, nor incrementing too slowly, and establish connection.

Regarding claim 30, the claim is rejected as applied to claim 15 with similar scope.

Regarding claim 31, the claim is rejected as applied to claim 15 with similar scope.

Regarding claim 32, the claim is rejected as applied to claim 15 with similar scope.

6. Claims 18-20, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Samson US 5,881,102 and Wiese et al. US 6,434,119 B1 (Wiese, cited previously) and Olafsson USP 5,870,438 (cited previously).

Regarding claim 18, Samson in view of Wiese teach all subject matter claimed, as applied to claim 17 or 25, however, do not explicitly teach wherein determining the training parameter includes a transmitter characteristic of the second transceiver including a symbol timing, carrier frequency, and carrier phase of the transmitter.

Olafsson teaches fast synchronization in a modem, and further teaches wherein the training parameter includes the transmitter characteristic of a symbol timing,

Art Unit: 2611

carrier frequency, and carrier phase of the transmitter (note col.1, lines 29-37).

Therefore, it would have been obvious to one skilled in the art at the time of the invention to include the training parameters taught by Olafsson in Samson in view of Wiese's training parameter for the purpose of increasing data transmission at a high data rate (note col.1, lines 37-39).

Regarding claim 19, the claim is rejected as applied to claim 18 with similar scope.

Regarding claim 20, the claim is rejected as applied to claim 18 with similar scope.

Regarding claim 26, the claim is rejected as applied to claim 18 with similar scope.

Regarding claim 27, the claim is rejected as applied to claim 18 with similar scope.

Allowable Subject Matter

7. Claims 2-11 and 28 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sam Ahn whose telephone number is (571) 272-3044. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on (571) 272-3021.

Art Unit: 2611

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
